

## *INEQUALITY BY THE NUMBERS 2020*

# LIS: A Resource for Inequality Research

Janet C. Gornick

Professor of Political Science and Sociology,  
Graduate Center, City University of New York  
Director, Stone Center on Socio-Economic Inequality –  
Home to the US Office of LIS

# LIS' mission

*To enable, facilitate, promote, and conduct cross-national comparative research on socio-economic outcomes and on the institutional factors that shape those outcomes.*

# LIS: an overview

## LIS: Cross-National Data Center

- founded 1983 (history video on LIS website)
- main/primary office located in Luxembourg
- independent, chartered, non-profit organization
- cross-national, participatory governance
- acquires, harmonizes, and disseminates data for research
- venue for research, workshops, conferences, and user training
- Director: Daniele Checchi

## Stone Center @ GC-CUNY – home to the US Office of LIS

- satellite office (founded 2006, folded into Stone Center 2016)
- located at the Graduate Center of the City University of New York
- administrative, managerial, development support for LIS
- venue for research, teaching, workshops, PhD supervision, and public programs
- Director: Janet Gornick

# What LIS does

Step 1. Identify appropriate datasets.

*Datasets must be nationally-representative and high quality; they must contain the necessary variables.*

Step 2. Negotiate with each data provider.

*Negotiation can take anywhere from five minutes to 20+ years. LIS doesn't always succeed.*

Step 3. Collect, harmonize, and document the data.

*LIS' data experts harmonize the data into a common, cross-national template, and create comprehensive documentation.*

*Note: The staff designed and implemented major template revisions in 2011 and in 2019.*

## What LIS does (cont).

Step 4. Double-check the harmonized data and create national-level indicators.

Step 5. Make the harmonized microdata available to researchers via “remote execution” – and provide access to aggregated data via user-friendly pathways.

Data,  
users, services, products,  
and research

## *Luxembourg Income Study (LIS) Database*

- First and largest database of harmonized income microdata
- Created with the launch of LIS in 1983
- Started with six countries; now 50+ countries
- Approximately 400 datasets (repeated cross sections)
- Datasets mostly start in 1980; recollected every 3-5 years; staff now working on Wave XI (2018)
- Used to study: *poverty; income inequality; labor market outcomes; policy effects*

## *Luxembourg Wealth Study (LWS) Database*

- First database of harmonized wealth microdata
- In existence since 2007
- 68 datasets from 19 countries – up or in process
- Revised and updated in 2016 (in coordination with Eurosystem's Household Finance and Consumption Survey - HFCS)
- Used to study: *household assets, debt, and expenditures; wealth portfolios; policy effects*

# Countries in LIS and LWS Databases (N=52)

*more than 65% of world population and 85% of world GDP*

| High-income countries<br>(N=33): |                 |                | Upper-middle-income<br>countries<br>(N=12): |              | Lower-middle-income<br>countries<br>(N=7): |
|----------------------------------|-----------------|----------------|---|--------------|--|
| Australia                        | Iceland         | Slovenia       | Brazil                                      | Panama       | Egypt                                      |
| Austria                          | Ireland         | South Korea    | China                                       | Paraguay     | Georgia                                    |
| Belgium                          | Israel          | Spain          | Colombia                                    | Peru         | Guatemala                                  |
| Canada                           | Italy           | Sweden         | Dom. Republic                               | Romania      | India                                      |
| Chile                            | Japan           | Switzerland    | Hungary                                     | Serbia       | Ivory Coast                                |
| Czech Republic                   | Lithuania       | Taiwan         | Mexico                                      | South Africa | Palestine                                  |
| Denmark                          | Luxembourg      | United Kingdom |   |              | Vietnam                                    |
| Estonia                          | Netherlands     | United States  |   |              |  |
| Finland                          | Norway          | Uruguay        |   |              |  |
| France                           | Poland          |                |   |              |  |
| Germany                          | Russia          |                |   |              |  |
| Greece                           | Slovak Republic |                |   |              |  |

New additions, mid-2020: Iraq, Jordan, Somalia, Sudan, Tunisia.

# Pathways to the data

## “LISSY” (LIS’ signature tool) ★

- remote-execution system -> access to microdata via “JSI”
- requires programming capacity (SAS, SPSS, Stata, R)
- allows use of sophisticated statistical analyses/methods
- registration required

## “WEBTAB”

- online table-maker; open to all

## KEY FIGURES

- aggregate indicators; open to all

*“DART”, launched mid-2020*

# Users, services, products

## LIS supports its many users

- enables microdata use – current 1000 researchers (nearly 8000 since 2007)
- hosts training workshops and produces self-teaching materials
- provides tools for non-technical users; DART is the next generation

## LIS is (increasingly) a core source of data for *other* data providers, e.g.:

- World Bank: *PovcalNet*
- UNU-WIDER: *World Income Inequality Database (WIID)*
- OECD: *Income Distribution Database (IDD) and Family Database*
- World Inequality Lab @ PSE: *World Inequality Database (WID)*

## LIS contributes to institutional flagship reports and media outlets:

- World Bank, OECD, several UN agencies
- New York Times, Guardian, Science

# Research

LIS sponsors a range of research activities

- quarterly: “Inequality Matters”
- Visiting Scholar program
- Working Paper series (N=850)
- periodic research/user conferences
- authored and edited books, e.g.

# *Illustrating* the scope and flexibility of the LIS and LWS data

- organized around 4 questions
  - largely descriptive
- the vast literature based on the LIS/LWS data utilizes more complex and sophisticated methods

## Question 1

How does income inequality vary across high-income countries? Has it increased since the 1980s in most high-income countries? Has “pre-tax-and-transfer” income inequality increased? “Post-tax-and-transfer” income inequality? Both?

Income inequality across households, Gini coefficients,  
non-elderly households,  
after taxes and transfers (blue) and before taxes and transfers (red)  
approximately 2016

Source: Luxembourg Income Study (LIS) Database

Income inequality across households, Gini coefficients,  
non-elderly households,  
after taxes and transfers (blue) and before taxes and transfers (red)  
approximately 1985 and 2016

Source: Luxembourg Income Study (LIS) Database

## Question 2

We hear a lot about “the hollowing out of the middle”. During the last three decades, what exactly has taken place in the middle of the income distribution? Has the size of “the middle” shrunk?

Population shares,  
non-elderly households:  
poor = household income < 50% median income (purple)  
middle class = household income is 50% - 150% of median (red)  
affluent = household income is > 150% of median (blue)  
income is after taxes and transfers  
approximately 1985

Source: Luxembourg Income Study (LIS) Database

Population shares,  
non-elderly households:  
poor = household income < 50% median income (purple)  
middle class = household income is 50% - 150% of median (red)  
affluent = household income is > 150% of median (blue)  
income is after taxes and transfers  
approximately 2016

Source: Luxembourg Income Study (LIS) Database

## Question 3

How do contemporary patterns of income inequality differ between high- and middle-income countries?

Income inequality across households, Gini coefficients,  
non-elderly households,  
after taxes and transfers (blue) and before taxes and transfers (red)  
approximately 2013

Source: Luxembourg Income Study (LIS) Database

Disposable household income levels, non-elderly households  
International dollars, 10th percentile, 90th percentile  
approximately 2013

Source: Luxembourg Income Study (LIS) Database

## Question 4

What do we know about the distribution of wealth across households in high-income countries? To what extent are income and wealth jointly distributed across households?

Income and wealth Ginis, 2010-2014 period  
(households with non-elderly heads)  
Source: Luxembourg Wealth Study (LWS) Database

|                |      | INCOME GINI | WEALTH GINI |
|----------------|------|-------------|-------------|
| Australia      | 2010 | 0.318       | 0.629       |
| Canada         | 2012 | 0.336       | 0.690       |
| Finland        | 2013 | 0.256       | 0.643       |
| Italy          | 2014 | 0.329       | 0.599       |
| United Kingdom | 2011 | 0.355       | 0.641       |
| United States  | 2013 | 0.473       | 0.878       |

Wealth is disposable net worth, which is household non-financial and financial assets (excluding pensions) minus all liabilities

Income and wealth inequality, 2010-2014 period - joint distribution  
(households with non-elderly heads)
