### 2025 The Influence of Intergenerational Transfers on Wealth Inequality in Rich Countries Revisited

This paper uses survey data from Germany, Spain, France, Italy, Great Britain and the United States to analyze how inheritances impact wealth inequality in a range of rich countries. Adopting an influence function regression approach, the paper calculates the counterfactual effects of small increases in the share of recipients of different-sized wealth transfers in each country. Results suggest that while a marginal increase in inheritance recipients generally contracts wealth inequality measures—confirming a common finding in the literature that inter-generational transfers tend to reduce relative wealth inequality—an increase in recipients of 'large' inheritances has the opposite effect. We determine what 'large' means in this context by point-estimating the thresholds above which transfers become disequalising. We find that transfers above the ninety-fifth percentile of the national transfer distribution are generally associated with an increasing effect on wealth inequality. Such thresholds are then put in perspective against the inheritance tax schedules in place in the six countries analyzed. No unique pattern emerges. While the thresholds are relatively close to tax exemption thresholds in Britain and Germany, they are somewhat higher in France and Spain and they are much lower in Italy and the United States.

and Wealth*

**2025** Wealth, Inheritance, and Concentration: Italy and its Regions from the Unification to the Great War  
Despite its relevance in 19th-century economics, wealth—its accumulation, composition, and distribution—has largely been neglected in Italian economic history. Filling this gap, we show that between the late 19th and mid-20th centuries, Italy presented a historically high value of total private wealth but had relatively small relevance in total bequests flows in proportion to national income. Then, we present novel estimates of wealth concentration between 1863 and 1914, combining national tabulations of inheritance tax records and microdata archives for Milan and Naples. During this period, wealth concentration in Italy was in line with the highest levels ever recorded since the late Middle Ages. Contrary to the evidence of declining income inequality in the period—traditionally considered the industrial 'take-off' phase of Italy—we find no clear signs of trends in wealth concentration or structural changes in wealth composition. This picture is confirmed and enriched by novel findings about wealth concentration at provincial and regional levels in the early 20th century. We show a great deal of heterogeneity beyond national aggregates but find no evidence of the classic North-South divide when looking at concentration. Likewise, we find no clear link between concentration levels and asset composition or economic development. Although contemporary inequality is much lower than early 20th-century figures, the 'real' wealth of present 'millionaires' seems much higher than that of historically rich individuals. Overall, the paper lays the basis for a very long-run view of wealth in Italy and reconsiders the impact of its industrialization at the end of the Liberal period.

### 2024 The Concentration of Personal Wealth in Italy 1995-2016

In this paper we estimate the distribution of personal wealth in Italy between 1995 and 2016, using a novel source on the full records of inheritance tax files, combined with surveys and national accounts. Whereas the level of wealth concentration is in line with other European countries, its time trend shows a larger increase, more in line with the U.S. Moreover, Italy stands out as one of the countries with the strongest decline in the wealth share of the bottom 50% of the population. The paper also sheds new light on the determinants of wealth inequality trends. First, we show that age plays a marginal role in explaining wealth concentration. Second, we show that changes in savings are the predominant force behind the increase in wealth inequality, even at the top. We also document that whereas house prices explain little of the wealth change across the distribution, equity prices account for a large part of wealth growth above the 90th percentile. Third, we point to the growing role of life-time wealth transfers, their increasing concentration at the top, and their tax treatment that has been favoring the wealthy.

### 2022 Drawing a Line: Comparing the Estimation of Top Incomes Between Tax Data and Household Survey Data

The paper uses the flexibility of household survey data to align their income categories and recipient units with the income categories and units found in data produced by tax authorities. Our analyses, based on a standardized definition of fiscal income, allow us to locate, for top-income groups, the sources of discrepancy. We find, using the cases of the United States, Germany, and France, that the results from survey-based and tax data correspond extremely well (in terms of total income, mean income, composition of income, and income shares) above the 90th percentile and up to the top 1 percent of the distribution. Information about income composition, available in the US, allows us to investigate the determinants of this gap in the US. About three-fourths of the tax/survey gap is due to differences in non-labor incomes, especially self-employment (business) income. The gap itself may be due to tax-induced re-classification of income from corporate to personal or/and to lower ability of surveys to capture top 1 percent incomes.

### 2022 Intergenerational Wealth Transfers in Great Britain from the Wealth and Assets Survey in Comparative Perspective

Wealth surveys that collect information on intergenerational transfers provide new scope for comparative study of those transfers and their relationship with wealth across rich countries. However, specific features of the Wealth and Assets Survey

(WAS), the central source of survey-based household wealth data, have severely constrained efforts to investigate patterns of wealth transfer in Great Britain in comparative perspective. In this paper we set out these issues and present ways of dealing with them. This allows us to examine the main similarities and differences in patterns of intergenerational wealth transmission of wealth between Great Britain and France, Germany, Italy, Spain and the United States, descriptively and by comparing estimated regression models. About 35% of British households reported receiving an intergenerational wealth transfer at some point, similar to most of the other countries but much higher than the US. Reported gift amounts are much smaller on average than inheritances in WAS, unlike France and Germany. The steepness of the age gradient in receipt is less pronounced for Great Britain than elsewhere, while the divergence across educational levels is relatively wide. We conclude with how WAS can be enhanced to address the issues identified at source and place future comparisons on a firmer base.

2022 The wealth (disadvantage) of single parents

Wealth plays a key role as a buffer in the face of economic shocks and in intergenerational transmission of advantage and disadvantage. This paper investigates the situation of single parents with respect to wealth in a cross-national context for six high-income countries spanning a variety of economic trajectories, institutional contexts and welfare regimes. Using data from high-quality household wealth surveys it demonstrates that single parents in all these countries are relatively disadvantaged in the wealth they hold compared with dual-parent families, more so in Britain, France, Germany and the US, and less so in Italy and, especially, Spain. It teases out where the major differences between single and dual parent families arise by wealth type: principal residence (for home-owners), other property, physical, financial and business assets, and debt. The single parent wealth deficit is not explained by differences in age profile or number of children between them and dual parents, while education, income home-ownership and receipt of intergenerational transfers do influence that gap. The policy implications of the findings are brought out, both with respect to how single parents are treated in social protection and taxation systems and more broadly in terms of the supports they require to overcome the barriers to accumulating wealth.

2021 Inheritance, Gifts and the Wealth Deficit of Low-Income Households

The role of intergenerational transfers of wealth via inheritance and gifts inter vivos in the accumulation of household wealth and the generation of wealth inequality has been hotly debated. This paper uses data from household wealth surveys for six rich countries – Britain, France, Germany, Italy, Spain and the US – to assess the contribution of intergenerational wealth transfers to wealth inequality using decomposition methods for the Gini coefficient. The results show that transfer wealth is consistently a good deal more unequally distributed than non-transfer wealth and total wealth. Transfer wealth accounts for only about one-tenth of overall wealth inequality for the US compared to one-third for Germany and Italy. This mirrors the importance of transfer wealth in total wealth in each country, with differences in inequality in transfer wealth and its correlation with total wealth having only a modest impact. We find that a marginal percentage increase in all transfers reduces total wealth inequality in Britain, Germany and the US, while it would increase total wealth inequality in France, Italy and Spain.

2021 kmr: A STATA Command to Correct Survey Weights for Unit Nonresponse

This article describes kmr, a Stata command to estimate a micro compliance function using group's nonresponse rates (2007, Journal of Econometrics 136: 213-235), which can be used to correct survey weights for unit nonresponse. We illustrate the use of kmr with an empirical example using the Current Population Survey and state-level nonresponse rates.

2020 A tale of two countries: The long shadow of the crisis on income and wealth in Germany and Italy

In this article, we investigate to what extent macroeconomic crises can leave a long-lasting mark on younger generations. To shed light on this important aspect, we use data related to the great financial crash of 2007/2008, contrasting evidence for two of the richest European countries, Germany and Italy.

2020 The Dynamics of Wealth Concentration: Thoughts on Tony Atkinson's Contributions

Following new evidence on increasing wealth concentration across several advanced countries, the topic has been attracting a great deal of attention. Estimating the size distribution of wealth and understanding its determinants is an exercise

surrounded with high levels of uncertainty and substantial controversies, but remains crucial to guide policy interventions. This short note attempts to link Tony Atkinson's body of work on wealth concentration to the fast expanding empirical research on wealth measurement as well as on the determinants of its growing concentration.

2018 Top Wealth Share in the UK over more than a century

The paper estimates the long-run evolution of top wealth shares for the United Kingdom – from 1895 to the present. We find that the application to the estate data of mortality multipliers to yield estimates of wealth among the living does not substantially change the degree of concentration over much of the period both in the UK and US, allowing inferences to be made for years when this method cannot be applied. The results show that wealth concentration in the UK remained relatively constant during the first wave of globalization, but then decreased dramatically in the period from 1914 to 1979. However, the decline in UK wealth concentration came to an end around 1980, and since then there is evidence of an increase in top shares, notably in the distribution of wealth excluding housing in recent years. We investigate the triangulating evidence provided by data on capital income concentration and on reported super fortunes.

2018 Banking Crises in the US: the Response of Top Income Shares in a Historical Perspective

This paper examines the response of income concentration in the US to the occurrence of major systemic banking crises since the beginning of the twentieth century. In doing so, the paper analyzes the shape of the upper income tail as well as the national income shares accruing to different groups within the richest decile. The findings suggest that systemic banking crises reduce income concentration within the top decile of the US pre-tax and transfers income distribution, and more generally, that the effect is highly heterogeneous across different top income groups. While the richest income group loses ground, the lower half of the top decile appears to gain in relative terms. However, evidence suggests that the estimated short-term effect of market forces stemming from banking crises can be relatively small in magnitude and even temporary in nature, as it may be quickly reabsorbed. These findings lend indirect support to the idea that only substantial changes in government policies and institutional frameworks can bring about radical changes in income distribution.

2016 The Challenge of Measuring UK Wealth Inequality in the 2000s

In this paper, we use evidence from existing data sources to attempt to answer three questions: (i) What is the share of total personal wealth that is owned by the top 1 per cent, or the top 0.1 per cent? (ii) Is wealth much more unequally distributed than income? (iii) Is the concentration of wealth at the top increasing over time? The main conclusion of the paper is that the evidence about the UK concentration of wealth post-2000 is seriously incomplete and significant investment in a variety of sources is necessary if we are to provide satisfactory answers to the three questions.

2015 Inequality and Crises Revisited

Recent debate has suggested that growing levels or high levels of inequality may be systematically associated with the occurrence of banking crises. Using the updated version of the Chartbook of Economic Inequality, this paper provides new empirical evidence on the 'level' hypothesis and reassesses the empirical validity of the 'growth' hypothesis. In line with previous work, the empirical analysis on the entire set of countries and years under investigation does not provide any conclusive and compelling statistical support to either of the hypotheses. However, the apparent statistical insignificance of the findings does not rule out the economic relevance of the question at hand, given that the hypotheses cannot be rejected for important crises and countries such as the US and the UK. Hence, the overall evidence is far from being conclusive and there are several reasons to shed further light on this important research topic.

#### HONORS, GRANTS, AND AWARDS

**PRIN** 2023-2024 PRIN Research Grant: 'Wealth, income and consumption inequality after Covid-19'

*Head of the Roma Tre University Unit - Substitute PI*

Bando Progetti di Rilevante Interesse Nazionale 2022 Prot. 2022HLKRTJ Award

Period: from Jun 2023 to June 2025

Principal investigator: Tullio Jappelli.

Co-investigators: Annalisa Scognamiglio and Franziska Disslbacher.

Amount: 170.000 EUR

*Economic and  
Social Research  
Council - ESRC*

2022-2026 Research Grant: 'Taxing the Super-rich'

*Co-investigator*

Award Period: from Nov 2022

Principal investigator: Andrew Summers.

Co-investigators: Arun Advani, Emma Chamberlain, Salvatore Morelli, Mike Savage, Helen Miller, Anna Powell-Smith.

Amount: 805.955 GBP

*Nuffield  
Foundation*

2018-2019 Research Grant: 'The wealth of families: long-lasting consequences of family wealth for adult socio-economic attainment and wellbeing'

*External Collaborator (10% FTE)*

Award Period: 1 Mar 2018 to 30 Sep 2019

Principal investigator: Brian Nolan.

Collaborators: Erzsebet Bukodi, Salvatore Morelli, Marii Paskov, and Philippe Van Kerm.

Amount: 171.299 GBP

*The Graduate  
Center - CUNY*

2017-2019 Fellowship: Advance Research Collaborative

*ARC - Distinguished Visiting Fellow*

*University of  
Venice 'Ca'  
Foscari'*

2016-2017 'Guido Cazzavillan' Research Fellowship

*Granted to economists focusing on strategies to overcome inequalities and poverty.*

Award Period: 1 Jun 2016 to 30 May 2017

Amount: 52.000 EUR

*Institute for New  
Economic  
Thinking*

2014-2016 Renewed research grant: "The Long Run History of Economic Inequality: Income, Wealth and Financial Crisis"

*Obtained renewed funding for the research project below.*

Principal investigators: F. Alvaredo, A. B. Atkinson, and S. Morelli.

Collaborators: F. Dennig, T. Piketty and M. Roser.

Award Period: 2014 to 2016

Amount: 125,000 USD

*Institute for New  
Economic  
Thinking*

2011-2013 Research grant: "The Long Run History of Economic Inequality: Income, Wealth and Financial Crisis"

Principal investigators: F. Alvaredo, A. B. Atkinson, and S. Morelli.

Award Period: 2011 to 2013

Amount: 225,000 USD

*University of  
Oxford*

2011-2013 Doctoral studentship funding

Doctoral studentship at the Programme for Economic Modelling – Emod (2011-2013);

Doctoral Studentship at the Economics Department (Jan-Jun 2012).

*Bank of Italy*

2008-2010 Bank of Italy PhD Scholarship: "Bonaldo Stringher"

Three Ph.D. scholarships are granted every year to economics graduates from Italian universities willing to pursue their PhD abroad. Award Period: Oct 2008 to Oct 2010

Amount: 27,000 EUR x 2 years (+ university fees)

*University of  
Rome 'Tor Vergata'*

2005 "Premio Sebastiano e Rita Raeli"

Degree prize granted to best graduate students.

ANSPC

2005 "Premio Oddone Fantini"

Granted by the Associazione Nazionale per lo Studio dei Problemi del Credito (ANSPC) to the three best graduate dissertations in Rome universities.

*Associazione  
'Marco Fanno'*

2003 Premio di Laurea "Marco Fanno"

Acknowledgement for best undergraduate dissertations granted by Medio Credito Centrale.

*Free University of  
Brussels (ULB)*

2003-2004 Erasmus fellowship

Erasmus study abroad program at the Department of Economics. Course work: Advance Macroeconomics (Prof. P. Weil), Advanced Econometrics (Prof. L. Reichlin), and Public Economics (Prof. F. Thys-Clement).

---

#### SELECTED WORK AND RESEARCH EXPERIENCE

*the Graduate  
Center - CUNY*

Aug 2017- Director of the GC wealth project, STONE CENTER ON SOCIO-ECONOMIC INEQUALITY

Coordinated the main research program, managed research budget (annual budget of USD 140,000), and supervised research assistants and consultants.

*Fondazione Basso,  
Rome*

Jan - Jun 2016 Researcher and consultant, FONDAZIONE BASSO

Conducted feasibility study and design of the project "Forum on Inequality and Diversity" involving research institutions, universities, and civil society. The activity also resulted in the production of a Report on Inequality in Italy.

*University of  
Oxford*

Jul - Dec 2013 Research officer, DEPARTMENT OF ECONOMICS

Conducted research on the Chartbook of Economic Inequality (see publications).

NIESR

Feb - May 2012 External collaborator, NATIONAL INSTITUTE OF ECONOMIC AND SOCIAL RESEARCH, UK

Conducted research and writing on income inequality and indebtedness (joint with P. Lucchino).

HDO -UNDP

Feb - May 2012 External collaborator, HUMAN DEVELOPMENT OFFICE (HDO -UNDP)

Conducted research and writing on macroeconomic crises and inequality (joint with A. Atkinson).

NBER

Sep - Dec 2010 Visiting Research student, NATIONAL BUREAU OF ECONOMIC RESEARCH, CAMBRIDGE MA (USA)

Conducted research and writing on the topics of the PhD Dissertation.

<i>ILO</i>	<i>Oct - Dec 2010</i>	External collaborator, INTERNATIONAL LABOUR ORGANIZATION
		Conducted research and writing on banking crises and inequality (joint with A. Atkinson).
<i>OPHI- UNDP</i>	<i>Mar - Apr 2010</i>	Research Assistant, OPHI-UNDP, OXFORD (UK)
		Calculated multidimensional poverty index for several countries. Work used in S.Alkire and M.E. Santos, 2010, "Acute Multidimensional Poverty: A New Index for Developing Countries " Human Development Research Paper 2010/11
<i>Bank of Italy</i>	<i>Jun - Sep 2008</i>	Research Intern, BANK OF ITALY, ROME (ITALY)
		Research Internship: conducted research on rents market and house ownership in Italy using EU-SILC. Hedonic regression methods were used to construct an alternative rent inflation index taking into accounts several characteristics and amenities of real estates. The activity was conducted under the supervision of R. Cristadoro and C. Rondinelli.
